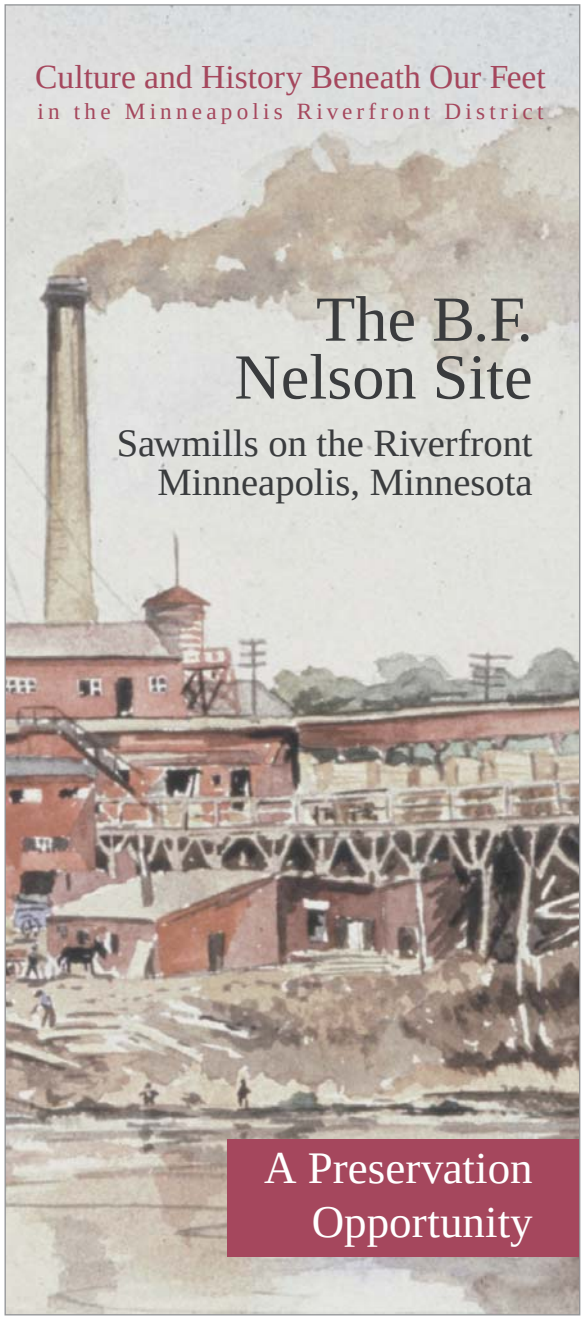
B.F. Nelson Site, Boom Island
Archaeological Monitoring and Interpretive Plan

Minneapolis, Minnesota



The 106 Group assisted the St. Anthony West Neighborhood Organization in addressing their environmental concerns regarding the B.F. Nelson site, while promoting their interest in the area's past.

With a grant from the St. Anthony Falls Heritage Board, the neighborhood employed the services of the 106 Group to monitor the Minnesota Pollution Control Agency's testing of the site, develop a brochure on the site's history, and create a slideshow presentation for the neighborhood's webpage.

In addition, we prepared a prospectus package to assist in fundraising efforts for subsequent archaeological and interpretive programs at the site.
