

National Park Service Update Nationwide Survey Methods and National Register Bulletin 24

Nationwide

Recent Past

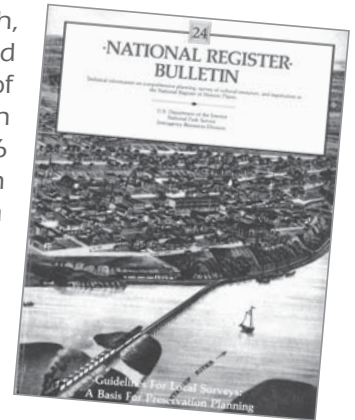

Vernacular architecture

Traditional cultural properties

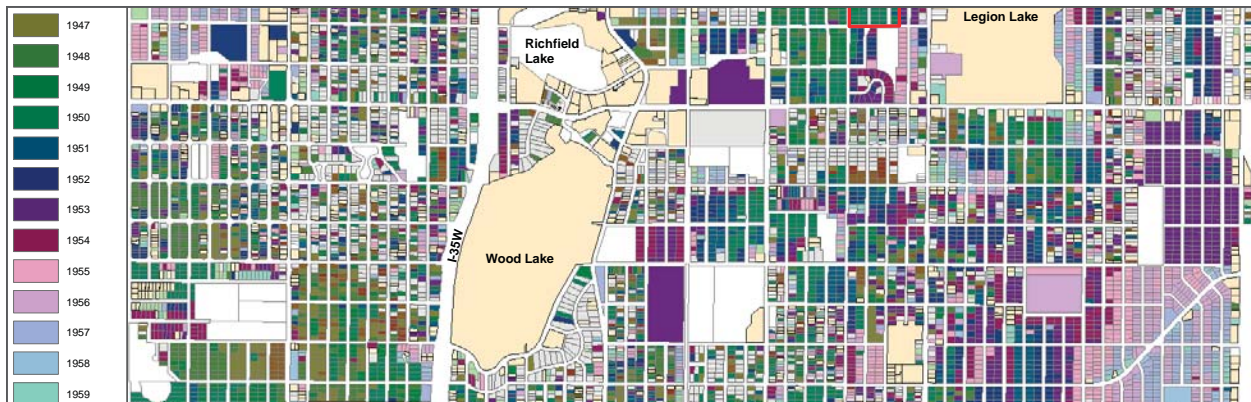

After a nationwide search, the National Park Service and the National Conference of State Historic Preservation Officers selected the 106 Group to support them in an extensive project to produce a publication on new strategies for cultural resources surveys in the United States. This publication will provide guidance for the planning and implementation of surveys, identification and evaluation of significant historic and archeological properties, and use of survey information for future planning and preservation decision-making purposes.

As part of this project, the 106 Group is working with SHPOs, THPOs, FPOs, local governments, and preservation consultants to gather input on innovative approaches to cultural resources survey that are being developed and implemented across the country. This project also involves updating National Register Bulletin 24 that covers the essential components for planning, and conducting cultural resources surveys. The desired outcome is to provide guidance and best practices strategies for agencies and organizations nationwide who are preparing to conduct cultural resources surveys.
