

Pillsbury "A" Mill, St. Anthony Falls

Minneapolis, Minnesota

A developer is currently working closely with the city, the Minneapolis Historical Society, neighborhood groups, and many other agencies to plan for the preservation and restoration of this National Historic Landmark and construction of new housing on the Minneapolis Riverfront.

As part of this work, the 106 Group has conducted an analysis of the archaeological potential for the site. Research has shown that there is potential for significant archaeological remains in one portion of the site. Field investigations are planned prior to any future construction activities.

In addition, the 106 Group provided consultation on the potential effects of the development on the historic buildings and the St. Anthony Falls Historic District.
