

# St. Croix River Crossing Architectural History Survey

*Stillwater, Minnesota*

As part of the planning process for the St. Croix River Crossing project at Stillwater, the 106 Group conducted an architectural history survey to identify properties eligible for listing on the National Register of Historic Places that could be affected by the new bridge. Of the 112 properties documented, three properties were recommended as eligible for the National Register.

The William and Mary Danforth House is a distinctive Second Empire style house; the Fairview Cemetery is a remarkable example of the Rural Cemetery movement; and the Stillwater & St. Paul Railroad had a significant impact on the lumbering and manufacturing economy of Stillwater. Other National Register eligible or listed properties include a unique shoddy mill, a historic overlook, a log cabin, the Stillwater State Prison Historic District, the Stillwater Commercial Historic District, and the Stillwater Cultural Landscape District. This analysis was incorporated into the Environmental Impact Statement (EIS) planning process.
